

Fosa terigopalatina - orificio esferopalatino

*Parte más posterior del suelo de la órbita encontramos el palatino

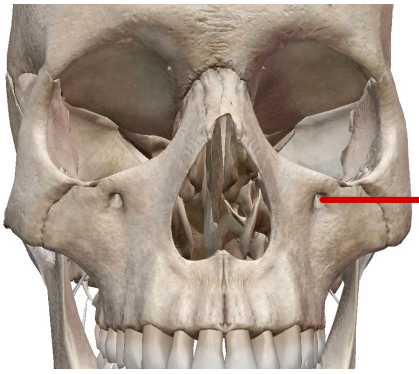

conducto óptico = entra nervio óptico y la arteria optálmica

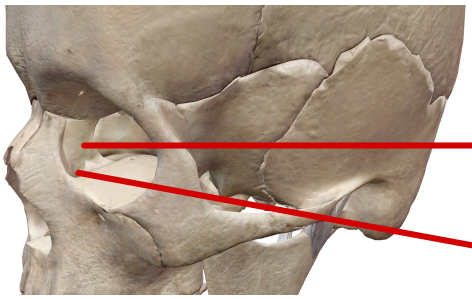

Fosa supraorbitario

Fosa infraorbitario

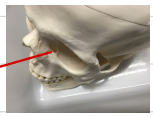

orificio infraorbitario

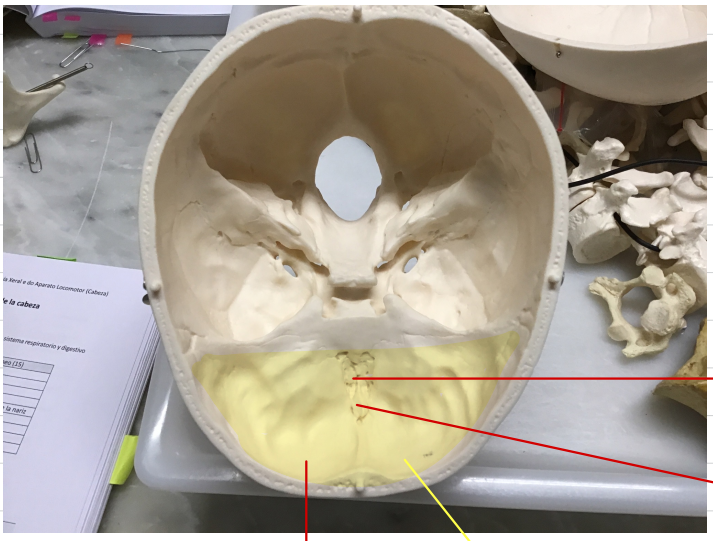

hueso lagrimal

conducto nasolagrimal

VISIÓN ENDOCRANEAL

hueso esmoides (techo fosas nasales, ramas nervio olfatorio atraviesan ...)

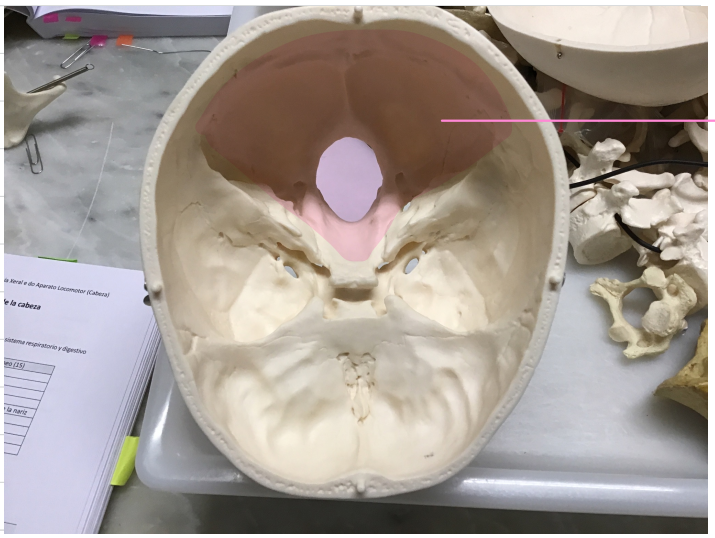

cresta del gallo = haz del craneo

Temporal

Fosa craneal anterior

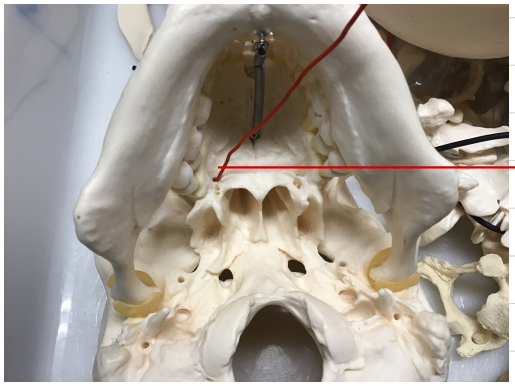

Fosa craneal media

Fosa craneal posterior

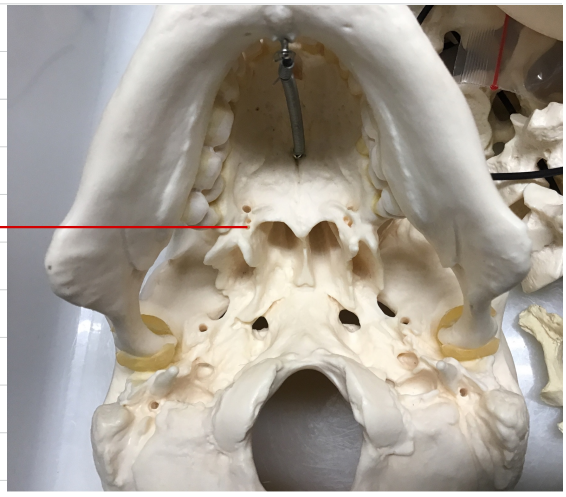

Fosa incisiva

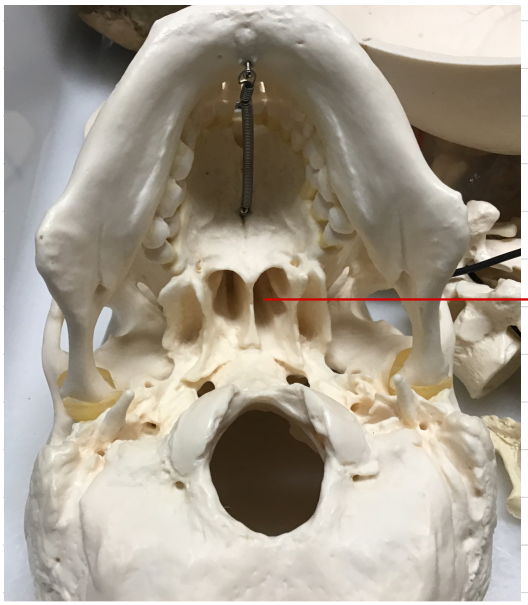

Agujero palatino mayor:
-Nervio palatino mayor
-Artéria y vena palatina mayor

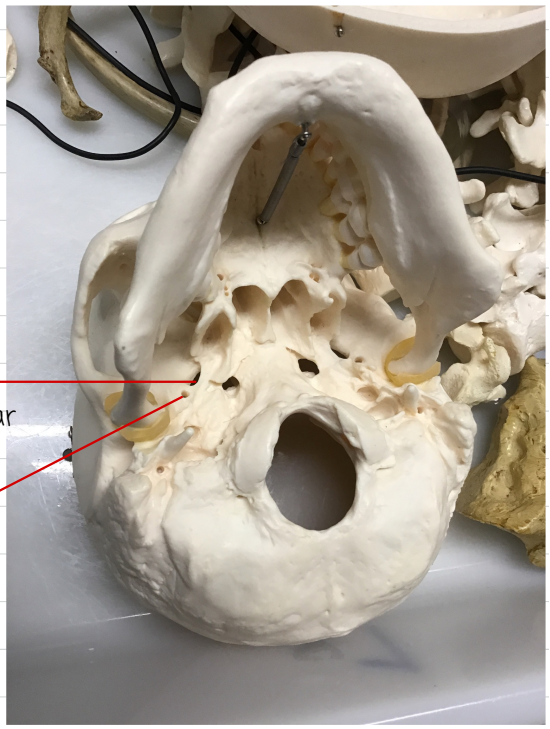

Comunican la cavidad bucal con la fosa terigopalatina y son atrabesadas por los nervios mayor y palatinos menores.

Agujeros palatinos menor (2)

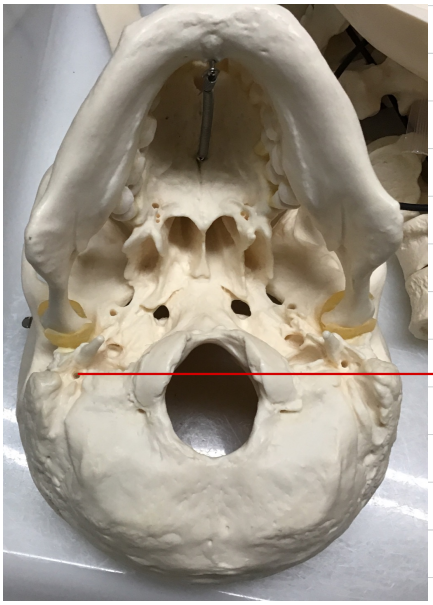

coana

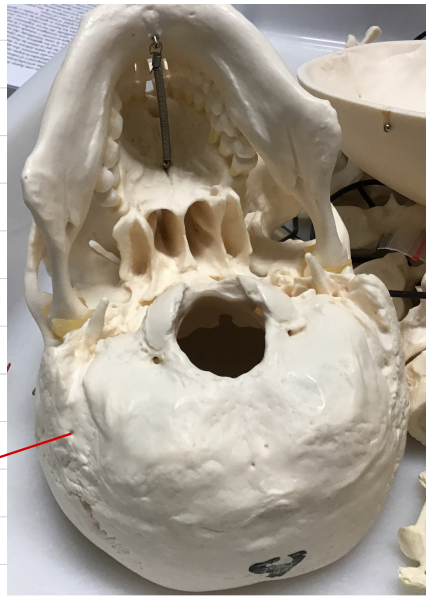

Agujero oval:
-Nervio mandibular

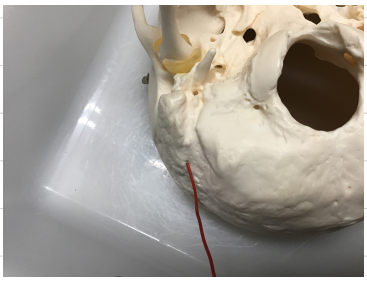

Agujero redondo menor o espinoso:
-Venas meníngeos médias

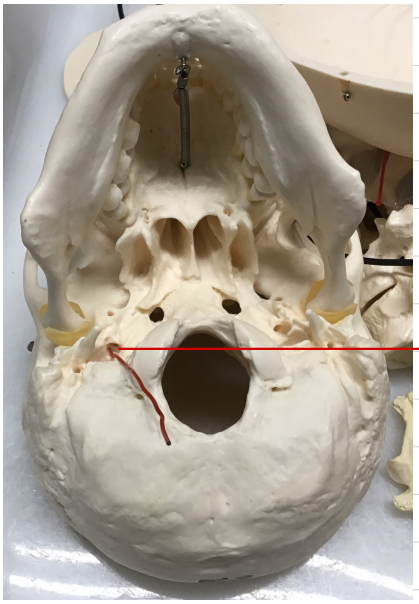

agujero estilomastoideo:
-Nervio facial (controla mimica)

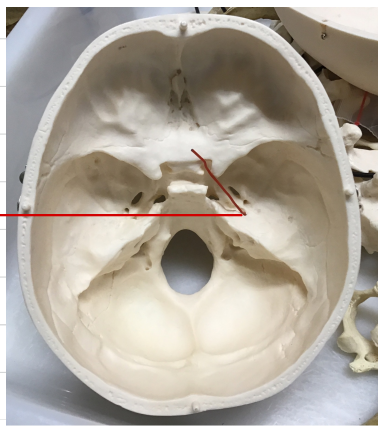

orificio mastoideo

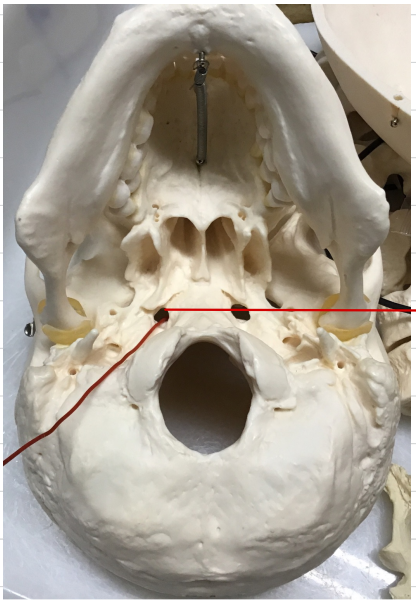

Orificio inferior del conducto carotiedo:
-Artéria carótida

orificio superior del conducto carotideo

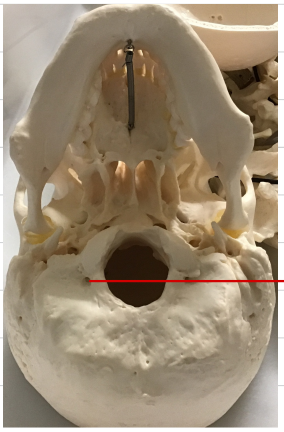

Agujero rasgado anterior

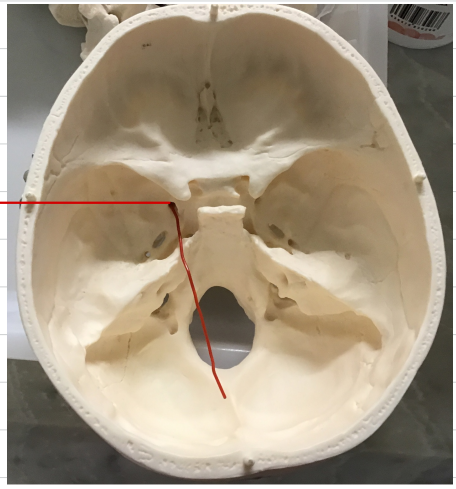

Agujero rasgado posterior

Orificio condileo

Orificio redondo mayor

NERVIOS
Sensitivo entra
Motor sale
Mixto entra y sale

Examen práctica:
Cuerpo Sion de caras
Y cuestión de orificios
